42 School - Exam Subjects (Names, Prototypes & Descriptions)

ft_putstr
*void ft_putstr(char *str);*
Print a string to standard output.

rev_print
*int main(int ac, char **av);*
Print the first argument in reverse.

maff_alpha
int main(void);
Print the alphabet with alternating cases (aBcD...).

maff_revalpha
int main(void);
Print the alphabet in reverse with alternating cases.

write_string
*void write_string(char *str);*
Write a string using write().

odd
int main(void);
Print odd numbers from 1 to 100.

even
int main(void);
Print even numbers from 2 to 100.

interval_space
*int main(int ac, char **av);*
Print numbers/letters in interval separated by spaces.

occ_a
*int main(int ac, char **av);*
Count and print occurrences of 'a'.

occ_z
*int main(int ac, char **av);*
Count and print occurrences of 'z'.

ft_strlen
*int ft_strlen(char *str);*
Return length of a string.

count_len
*int count_len(char *str);*
Return number of chars in a string.

count_alen
*int count_alen(char *str);*
Count alphabetic characters in a string.

nth_char

*int main(int ac, char **av);*

Print the nth character of a string.

rle

*int main(int ac, char **av);*

Run-length encoding: compress consecutive chars.

digit_sum

int digit_sum(int n);

Return the sum of the digits of an integer.

rot_13

*void rot_13(char *str);*

Apply ROT13 substitution cipher.

alpha_mirror

*void alpha_mirror(char *str);*

Replace each letter by its mirror (a<->z, b<->y).

ulstr

*void ulstr(char *str);*

Swap lowercase to uppercase and vice versa.

rotoone

*void rotoone(char *str);*

Rotate characters by 1 in the alphabet.

first_last_char

*void first_last_char(char *str);*

Print the first and last characters of a string.

count_letters

*int count_letters(char *str);*

Count all letters in a string.

pingpong

int main(void);

Print numbers in a ping-pong sequence.

print_interval

*int main(int ac, char **av);*

Print numbers in given interval.

print_odd

int main(void);

Print odd numbers in range.

print_even

int main(void);

Print even numbers in range.

swap_cases

*void swap_cases(char *str);*

Swap uppercase and lowercase.

first_word

*int main(int ac, char **av);*

Print the first word of a string.

ft_putnbr

void ft_putnbr(int n);

Print an integer to standard output.

aff_first_param

*int main(int ac, char **av);*

Print the first parameter of the program.

aff_last_param

*int main(int ac, char **av);*

Print the last parameter of the program.

last_word

*int main(int ac, char **av);*

Print the last word of a string.

union

*int main(int ac, char **av);*

Print the union of two strings without duplicates.

inter

*int main(int ac, char **av);*

Print intersection of two strings without duplicates.

wdmatch

*int main(int ac, char **av);*

Check if first string is a subsequence of second.

is_palindrome

*int is_palindrome(char *str);*

Return 1 if string is palindrome, else 0.

title

*void title(char *str);*

Capitalize the first letter of each word.

search_and_replace

*int main(int ac, char **av);*

Replace first char by second in a string.

base16

void base16(int n);

Convert and print number in hexadecimal.

ft_range
*int *ft_range(int start, int end);*
Return array of ints from start to end inclusive.

ft_rrange
*int *ft_rrange(int start, int end);*
Return array of ints from end to start inclusive.

ft_itoa
*char *ft_itoa(int n);*
Convert int to string.

ft_split
*char **ft_split(char *str);*
Split string into array of words.

list_remove_if
*void list_remove_if(t_list **begin, void *data_ref, int (*cmp)());*
Remove elements equal to data_ref from list.

sort_list
*t_list *sort_list(t_list *lst, int (*cmp)(int, int));*
Sort linked list using cmp function.

count_alpha
*int count_alpha(char *str);*
Count alphabetic characters.

ord_alphlong
*int main(int ac, char **av);*
Sort words by length, then lexicographically.

str_maxlenoc
*int main(int ac, char **av);*
Find longest common substring among args.

count_island
*int main(int ac, char **av);*
Count islands in a map (2D array).

ft_diam
*int main(int ac, char **av);*
Compute diameter (geometry-related).

infin_mult
*int main(int ac, char **av);*
Multiply two big numbers as strings.
